Islands of the Maloye More Strait

There is a small, uninhabited island in Baikal in the Maloye More (the Small Sea) Strait, and it is called Ogoy. The word "Ogoy" comes from the Buryat word, which means "waterless". The length of the island is 2,9 km, and the width is 0,6 km. It is the largest island in the strait between Olkhon Island and the mainland. About a hundred herring gulls nest on the Ogoy Island. There is also an endemic species of vole – the Olkhon vole. The local relict grasses are included in the Red Book. The island has never been inhabited by people, and this has helped preserve unique species of wildlife.

In 2005, a Buddhist stupa or Stupa of Enlightenment was erected on the highest point of the island. The snow-white, three-story structure with a dome and spire became a new symbol of the island. The shape of the island resembles the outlines of a dancing Dakini, where the head and body are clearly visible, and in the heart area of the goddess is a stupa. The Enlightenment Stupa is the main of the eight types of stupas in Buddhism because it symbolizes the main goal of Buddhism: enlightenment.
